## ***FOR IMMEDIATE RELEASE***

Exclusive ReACT Password Reset & Synchronization Dashboard Provides Administrators LIVE User Activity

**NAPLES, FL (February 2010)** – Advanced Software Products Group, Inc., developer of one of the leading password reset & synchronization software solutions, is pleased to announce the GA release of ReACT v3.0.

ReACT is the only Password Reset & Synchronization software to offer an interactive Dashboard. The ReACT Dashboard provides administrators with the tools and analytics needed to effectively manage user accounts. Administrators can now view live user activity, snapshots, failures/activities and administrative activity overviews all on one easy to read screen.

ReACT version 3.0 also provides the end user with “new and improved” access via new panels for password resets and help desk administration. These new panels are accessible via Standard web browsers and/or desktop client. Additionally, the new Account Unlock feature provides the end user with the capability to unlock their existing accounts without the need to change passwords.

ReACT is a unique application designed to automate the password reset and synchronization process across the entire enterprise. ReACT allows the end user to reset their own password at any time without the need to change their password again at sign-on. ReACT virtually eliminates password reset related calls to the Help Desk, which accounts for up to 35% of their total calls. At up to \$38 per call, the savings is evident. This centralized, enterprise-wide password reset tool, provides support for virtually all operating systems and applications within the enterprise including RACF [z/OS], Novell/NDS, Windows domain, Windows active directory and more. In addition, ReACT easily incorporates other disparate systems and applications through the ActiveX® scripting component.

As a provider of innovative data center solutions for nearly 25 years, Advanced Software Products Group, Inc. remains a pioneer in leading edge corporate data center performance by providing specific solutions in the areas of Data Security, Capacity Planning, Storage Administration, CICS Productivity, and Systems Productivity.
